

Key Antibodies For Bladder Pathology

Our Top Bladder Pathology Antibodies

URO-3™ Triple Stain

URO-3 Triple Stain (CD44 + p53 + CK20) may aid in differentiating urothelial reactive atypia from carcinoma in situ (CIS) in bladder.

Uro-2™ (CK20 + p53)

In normal urothelium, the superficial umbrella cell layer shows reactivity for CK20 only; whereas, p53 nuclear staining is absent to focal.

Uroplakin II + Uroplakin III

Uroplakin II + Uroplakin III antibody may be a specific and sensitive antibody cocktail for urothelial carcinoma and in discriminating bladder cancer from renal and prostate carcinomas.

Uroplakin II

Studies have shown Uroplakin II mRNA was highly specific and was expressed in bladder cancer tissues and urothelial carcinoma of the bladder.

Key Antibodies for Bladder Pathology

Bladder cancer is the 11th most common cancer in the UK. 46% of people with bladder cancer survive their disease for ten years or more (2013-17) and 49% of cases are preventable. Over the last decade, bladder cancer incidence rates have decreased by almost a sixth (16%) in the UK. Menarini Diagnostics is proud to offer bladder cancer antibodies which may aid in the identification of their respective proteins by IHC in FFPE tissues.
